

In the last three years, every lightbulb in the company was changed to LED to help cut energy usage. Recycling devices for wastepaper were also introduced, as was a waste water reclamation system for use in industrial applications.

To further lower the company's carbon footprint, SSH attempts to keep most of the processes internal or at least use the services of trusted partners close by, to reduce the footprint of hauling product and supplies.

98% of the Schmid Schrauben Hainfeld's packing is made of cardboard, so the company hardly uses any plastics for packing its products. Nor in terms of transportation or in boxing, to the point where if the cartons are a bit loose, staff will reuse old cartons to fill the gaps.

When talking about the Covid-19 pandemic, the company worked at 100% capacity throughout this time. While using several measures in order to ensure the safety of the workforce, the company actually recorded its highest turnover ever in 2021, which was almost €40 million.

Schmid Schrauben Hainfeld remains very positive for the future, and the company is always looking for partners to work with towards this great future. ■
